

MPM Consortium — IP & Licensing Policy

1. Purpose and Scope

This policy governs all intellectual property associated with the **Mechanical Power Module (MPM)** standard, including:

- Core mechanical geometry
- Interface specifications
- Safety envelopes
- Compliance protocols
- Digital orchestration schemas
- Attachment ecosystem extensions

It ensures the MPM remains a **neutral, globally interoperable mechanical-power primitive**, while enabling innovation and commercial differentiation.

2. Ownership of Core IP

2.1 Consortium-Owned IP

The following IP is owned collectively by the MPM Consortium:

- **MPM Standard (v1.x)** — geometry, interfaces, tolerances
- **MPM Safety Envelope** — force limits, stability criteria, lockout semantics
- **MPM Compliance Protocols** — test procedures, certification criteria
- **MPM Identity & Capability Schemas** — serial numbering, capability profiles
- **MPM Digital Orchestration Semantics** — telemetry fields, control primitives

This IP is governed by the Technical, Digital, and Policy Chambers and cannot be privately owned, patented, or encumbered by any member.

2.2 Member-Owned IP

Members retain ownership of:

- Manufacturing processes
- Proprietary materials or fabrication methods
- Attachment designs that comply with the MPM interface
- Digital orchestration implementations (cloud plugins, fleet management tools)
- Safety or performance enhancements that do not alter the standard

Members may patent innovations **above** the standard, but not the standard itself.

3. Licensing Model

The MPM Consortium uses an **Open Core, Controlled Extensions** licensing architecture.

3.1 Open Core License (Royalty-Free)

The core MPM standard is licensed under a **royalty-free, open license** that permits:

- Manufacturing of MPM-compliant units
- Creation of compatible attachments
- Integration into digital orchestration systems
- Use in commercial, governmental, or humanitarian deployments

Conditions:

- Must pass MPM certification
- Must use official compliance marks
- Must not fragment or fork the standard

3.2 Controlled Extension License (Royalty-Bearing)

Extensions beyond the core standard may be licensed under controlled terms, including:

- Advanced telemetry modules
- Premium safety features
- Specialized attachment interface variants
- High-performance digital orchestration schemas

Royalty rates are determined by the Licensing Committee and approved by all chambers.

3.3 Attachment Ecosystem License

Attachment manufacturers receive:

- Access to the attachment interface specification
- Rights to produce compatible attachments
- Rights to use “MPM Attachment-Compatible” marks

Fees:

- Annual ecosystem fee
- Per-attachment certification fee

4. Patent Policy

4.1 No Blocking Patents

Members may not assert patents that block:

- Implementation of the MPM standard
- Manufacturing of compliant units
- Creation of compliant attachments
- Use of standard digital orchestration schemas

4.2 RAND-Z Commitment

All members agree to **Reasonable And Non-Discriminatory, Zero-Royalty (RAND-Z)** licensing for any patents essential to implementing the core standard.

4.3 Optional Royalty-Bearing Patents

Patents covering **non-essential enhancements** may be licensed commercially.

5. Compliance Marks & Branding

The Consortium maintains and licenses the following marks:

- **MPM-Certified** — for fully compliant units
- **MPM Attachment-Compatible** — for certified attachments
- **MPM Digital-Compatible** — for orchestration systems

Use of marks requires:

- Passing certification
- Maintaining compliance

- Paying applicable licensing fees

Unauthorized use triggers enforcement actions.

6. Certification & Licensing Conditions

To obtain and maintain a license:

- Products must pass certification
- Manufacturers must submit annual compliance reports
- Digital systems must pass cybersecurity audits
- Attachments must meet interface and safety requirements

Licenses may be suspended for:

- Safety violations
- Standard fragmentation
- Misuse of compliance marks
- Failure to pay fees

7. IP Contributions

Members contributing IP to the standard must:

- Grant perpetual, irrevocable, royalty-free rights
- Disclose any essential patents
- Provide documentation sufficient for implementation

Contributions are reviewed by the Technical Chamber and recorded in the Standards Ledger.

8. Enforcement

The Consortium may enforce IP rights through:

- Revocation of certification
- Suspension of membership
- Legal action for misuse of marks or violation of RAND-Z
- Public notice of non-compliance

Enforcement decisions require:

- 67% approval in the Technical Chamber
- 67% approval in the Policy Chamber
- Secretariat concurrence

9. Amendments

Changes to this policy require:

- 75% supermajority in all chambers
- No Founding Member veto
- 45-day public comment period
