

Letter of Interest — National Renewable Energy Laboratory (NREL)

(Technical Validation & Federal Alignment)

To: MPM Consortium Formation Committee **From:** National Renewable Energy Laboratory (NREL) **Subject:** Letter of Interest in Participation and Technical Collaboration

The National Renewable Energy Laboratory expresses its interest in supporting the development, validation, and deployment of the **Mechanical Power Module (MPM)** standard. NREL recognizes the MPM as a promising mechanical-power primitive capable of improving interoperability, modularity, and logistics efficiency across distributed industrial systems.

NREL is particularly interested in collaborating on:

- **Technical validation** of the MPM mechanical interface, safety envelope, and geometry tolerances
- **CRADA-aligned pilot deployments** within controlled research environments
- **Measurement and telemetry frameworks** suitable for federal-grade compliance
- **Standards harmonization** with DOE, ASME, and NIST

NREL views the MPM as aligned with national priorities in distributed infrastructure modernization and modular mechanical systems. We look forward to continued dialogue and potential participation in the MPM Consortium.

Sincerely, **NREL Technology Partnerships Office**

Letter of Interest — Industrial OEM Manufacturer

(Manufacturing, Host-System Integration, Multi-Vendor Interoperability)

To: MPM Consortium Standards Board **From:** Apex Industrial Systems (Representative OEM) **Subject:** Letter of Interest in MPM Manufacturing & Host-System Integration

Apex Industrial Systems submits this Letter of Interest to participate in the Mechanical Power Module (MPM) initiative. As a manufacturer of industrial pumps, drives, and mechanical equipment, we see significant value in a universal mechanical-power interface that enables modularity, rapid swap-out, and multi-vendor interoperability.

We are specifically interested in:

- **Host-system integration** for industrial equipment

- **Module manufacturing** aligned with MPM geometry and tolerances
- **Safety-interlock co-development**
- **Participation in compliance certification** for MPM v1.0

Apex supports the MPM's commitment to **competitive neutrality**, **open standards**, and **vendor-agnostic interoperability**. We believe the MPM will reduce lifecycle costs, simplify maintenance, and expand procurement flexibility across industrial sectors.

We welcome further engagement with the Consortium and Standards Board.

Sincerely, **Apex Industrial Systems — Engineering & Standards Division**

Letter of Interest — Colorado Infrastructure Agency

(Pilot Deployment, Public-Sector Alignment, Safety & Logistics)

To: MPM Deployment Council **From:** Colorado Infrastructure Modernization Office **Subject:** Letter of Interest in MPM Pilot Deployment & Public-Sector Collaboration

The Colorado Infrastructure Modernization Office expresses interest in participating in pilot deployments of the Mechanical Power Module (MPM) within state and municipal infrastructure systems. The MPM's modular mechanical-power architecture aligns with Colorado's goals for resilient, maintainable, and interoperable infrastructure.

We are interested in exploring pilot deployments in:

- **Water infrastructure nodes** (pumps, drives, distributed mechanical systems)
- **Municipal industrial facilities**
- **Emergency mechanical-power systems**
- **Swap-station logistics** for rapid maintenance operations

Colorado is committed to ensuring regulatory alignment with DOE, FERC, and state safety codes. We believe the MPM can significantly improve uptime, reduce maintenance burden, and support distributed industrialization across the state.

We look forward to continued collaboration with the MPM Consortium.

Sincerely, **Colorado Infrastructure Modernization Office — Mechanical Systems Division**
